General information

TWISTER is a mobile folding table which can be handled easily.

The table is designed for highest stability in all positions, the mechanism combines two hinges on a tilted axis.

In the swivel area top and legs move automatically synchronised.

Thanks to its patented folding function TWISTER allows the realisation of multiple requirements at the workplace, regardless if it is as a temporary solitary work table, a generously dimensioned conference table or a variable educational furnishing solution.

TWISTER complies with the EU guideline 90/270 as well as all recent German norms and laws (Labour Protection Law, DIN EN 527,1-3, DIN Technical Report 147, DIN 4543-1, BGI 650 and BGR 234).

Under the terms of our Product Continuity policy, all parts subject to fair wear and tear must continue to be available for a period of 10 years from the time when a product is officially withdrawn from our range/portfolio. Excluded from this are fabrics, finishes and any components that require specific casts or tools to produce. Replacement parts do not have to be 100% identical provided that product functionality is not compromised.

Table tops

Material and surface

All table shapes are available melamine coated or veneered. To provide a smooth transition between the surface top and edge and thereby creating the illusion of a single flowing solid surface all melamine coated table tops have laser edgebands.

3-layer chipboards according to DIN 68765 standard, emission certified E1, 2.5cm thick, directly covered with melamine on both sides, resp. veneered on both sides are used. The top side of the veneered table tops is covered with the chosen veneer, the underside with the corresponding counterpart.

Depending on the variant, all edges are rounded with a 3mm strong ABS-edge banding or with a 3mm strong veneer edge, rounded with a radius of 3mm.

The rounded table tops are available with a protective edge subject to an additional charge.

The top surface is lightfast, mostly blend-free and extremely scratch-resistant.

Some table tops are also available with a 1.3cm thick solid core top:

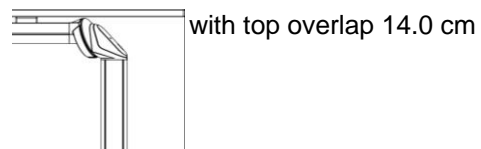

Rectangular shape with rounded edges (radius = 6 cm) (starting from width 140.0 cm),

Tables with rounded edges and rounded sides.

Tables with rounded corners and all solid-core top tables have a top overlap of 14 cm.

without top overlap

with top overlap 14.0 cm

Legs

Leg description

The TWISTER frame is designed as a column leg. Cantilever, column and head part are screwed together and attached to the cross beam. The frame will be supplied assembled.

The table is designed for highest stability in all positions, the mechanism combines two hinges on a tilted axis

In the swivel area top and legs move automatically synchronised.

Top quality materials guarantee a maximum life time:

cantilever	alu pressure casting
leg profile	alu strand casting
head piece	alu pressure casting
crossbeam tray	alu strand casting
cross traverse	powder-coated steel
trip handle	powder-coated steel
covers	polyamide (PA)

Every cantilever has two castors, one has a brake.

Table connector

The table can be connected with table connectors.

Two different models are available.

Model 01, for tables without protective edge:

This model is a force-locked connection underneath the table tops which is operated too-free.

Model 02, for tables with protective edge:

The plastic connectors are fitted together underneath the table top.

These connectors can be fixed at the side as well as at the rear underneath the table top.

Modesty panel

A modesty panel made of white acrylic glass is available for all Table shapes.

Environmental compatibility

TWISTER is made of very few materials, easy to separate: chipboard, aluminium, steel and polyamide can easily be recycled. No foams or other CfC-containing materials are used.

All steel and aluminium parts are powdered with solvent-free and eco-friendly lacquers.

The extruded aluminium sheaths are anodised.

According to the demands of the dangerous substances decree (§ 9 Abs.3.4) only chipboards of the emission class E1 are used. Veneer surfaces are protected with water based varnishes.

For protection of the furniture during the transport only reusable packaging material is used.
